

## Imperial® Humbucker

The Imperial® Humbucker is our take on the original 1950s P.A.F. pickup. We've designed the Imperial® to draw from the long-revered qualities of the original P.A.F.s while improving on their frequency balance and giving a slight boost to the bridge pickup's output.

Avg. DC: Neck 7.6K, Bridge 8.4K

## Low Wind Imperial® Humbucker

Ideally suited for guitars that have a darker overall tone, our Low Wind Imperials produce more treble response and a tighter low end than our standard Imperial®. Great for use in semi-hollow body and hollow body guitars.

Avg. DC: Neck 7.0K, Bridge 7.9K

## High Wind Imperial® Humbucker

Get a thicker, fuller sound that will push your amp harder and faster than our standard Imperials while delivering a smooth tone and softer attack. We often recommend these for thin-bodied guitars like Gibson® SGs.

Avg. DC: Neck 8.4K, Bridge 9.4K
