

P-90 Stock Wind

Lollar P-90s have a warm, full tone with the clarity and articulation associated with larger single-coils from the late '50s. You'll get a balanced output between the neck and bridge positions along with an expressive dynamic range.

Avg. DC: Neck 8.2K, Middle 8.7K, Bridge 9.1K

P90 50's Wind

For our '50s Wind P-90s we use weaker magnets to produce lower output. When compared with our standard P-90s, the '50s Wind will have a softer overall attack while producing a tone that is bright with a balanced frequency response.

Avg. DC: Neck 7.1K, Middle 7.2K, Bridge 7.4K
